The gas line was disconnected from the meter and properly isolated. The system was then pressurized with dry nitrogen to 20 psi. During testing, multiple leaks were identified throughout the system. Corrective actions included replacing the unions at all three RTUs, replacing the leaking gas valve on RTU 3, and rethreading/replacing several fittings across all RTUs. Once all leaks were resolved, the gas line was pressurized to 15 psi, in accordance with gas company specifications, to prepare the system for inspection.
